## Lab 4

1. 提交作業之前，建議可以先點選上方工具列的**Kernel**，再選擇**Restart & Run All**，檢查一下是否程式跑起來都沒有問題，最後記得儲存。
2. 請先填上下方的姓名(name)及學號(student\_id)再開始作答，例如：

```
name = "我的名字"
student_id= "B06201000"
```

3. 演算法的實作可以參考[lab-4 \(https://yuanyuyuan.github.io/itcm/lab-4.html\)](https://yuanyuyuan.github.io/itcm/lab-4.html), 有任何問題歡迎找助教詢問。
4. **Deadline: 11/20(Wed.)**

In [1]:

```
name = ""
student_id = ""
```

## Exercise 2

Let  $I(f)$  be a define integral defined by

$$I(f) = \int_0^1 f(x) dx,$$

and consider the quadrature formula

$$\hat{I}(f) = \alpha_1 f(0) + \alpha_2 f(1) + \alpha_3 f'(0) \quad (*)$$

for approximation of  $I(f)$ .

Part 1.

Determine the coefficients  $\alpha_j$  for  $j = 1, 2, 3$  in such a way that  $\hat{I}$  has the degree of exactness  $r = 2$ . Here the degree of exactness  $r$  is to find  $r$  such that

$$\hat{I}(x^k) = I(x^k) \quad \text{for } k = 0, 1, \dots, r \quad \text{and} \quad \hat{I}(x^j) \neq I(x^j) \quad \text{for } j > r,$$

where  $x^j$  denote the  $j$ -th power of  $x$ .

(Top)

Derive the values of  $\alpha_1, \alpha_2, \alpha_3$  in ( \* ). You need to write down the detail in the cell below with Markdown/LaTeX.

Please write down your answer here.

Fill in the tuple variable `alpha_1` , `alpha_2` , `alpha_3` with your answer above.

In [2]:

(Top)

```
'''Hint:
alpha_1 = ?
alpha_2 = ?
alpha_3 = ?
'''
# ===== 請實做程式 =====
# =====
```

**Comments:**  
No response.

Out[2]:

'Hint: \nalpha\_1 = ?\nalpha\_2 = ?\nalpha\_3 = ?\n'

In [3]:

part\_1

(Top)

## Part 2.

Find an appropriate expression for the error  $E(f) = I(f) - \hat{I}(f)$ , and write your process in the below cell with Markdown/LaTeX.

Please write down your answer here.

## Part 3.

### Compute

$$\int_0^1 e^{-\frac{x^2}{2}} dx$$

using quadrature formulas ( \* ), the Simpson's rule and the Gauss-Legendre formula in the case  $n = 1$ . Compare the obtained results.

### Part 3.1

Import necessary libraries

In [4]:

```
import numpy as np
import matplotlib.pyplot as plt
from scipy.special.orthogonal import p_roots
```

Part 3.2

Define the function  $f(x) = e^{-\frac{x^2}{2}}$  and its derivative.

In [5]:

```
def f(x):
    # ===== 請實做程式 =====

    # =====

def d_f(x):
    # ===== 請實做程式 =====

    # =====
```

Comments:  
No response.

File "<ipython-input-5-d247495c29e2>", line 6  
def d\_f(x):  
^  
IndentationError: expected an indented block

Print and check your functions.

In [6]:

part\_3\_1\_1 (Top)

```
print('f(0) =', f(0))
print("f'(0) =", d_f(0))
### BEGIN HIDDEN TESTS

**Part 3.4**

Compute

$$\int_0^1 e^{-\frac{x^2}{2}} dx$$

with Simpson's rule.

Implement Simpson's rule

In [9]:

(Top)

```
def simpson(
    f,
    a,
    b,
    N=50
):
    ...
    Parameters
    -----
    f : function
        Vectorized function of a single variable
    a , b : numbers
        Interval of integration [a,b]
    N : (even) integer
        Number of subintervals of [a,b]

    Returns
    -----
    S : float
        Approximation of the integral of f(x) from a to b using
        Simpson's rule with N subintervals of equal length.
    ...
    # ===== 請實做程式 =====
    # =====
```

**Comments:**  
No response.

Run and check your function.

In [10]:

(Top)

```
simpson

S = simpson(f, 0, 1, N=50)
print("The result from Simpson's rule is", S)
### BEGIN HIDDEN TESTS

      5 ### END HIDDEN TESTS
```

NameError: name 'f' is not defined

Part 3.5

Compute

$$\int_0^1 e^{-\frac{x^2}{2}} dx$$

with the Gauss-Legendre formula using  $n = 1$ .

In [11]:

(Top)

```
def gauss(
    f,
    n,
    a,
    b
):
    ...
    Parameters
    -----
    f : function
        Vectorized function of a single variable
    n : integer
        Number of points
    a , b : numbers
        Interval of integration [a,b]

    Returns
    -----
    G : float
        Approximation of the integral of f(x) from a to b using the
        Gaussian-Legendre quadrature rule with N points.
    ...
    # ===== 請實做程式 =====
    # =====
```

Comments:

No response.

Run and check your function.

In [12]:

Gauss-Legendre

(Top)

```
G = gauss(f, 1, 0, 1)
print("The result from Gauss-Legendre is", G)
### BEGIN HIDDEN TESTS
